Goals

I am looking forward for a first new opportunity as developer, I have a lot of mini applications in the bag using different languages like: ReactJs (TypeScript), C#, Java (Spring Framework) and Elixir. You can also check on my GitHub: https://github.com/luizfelipebraga

I am also very curious person, who is always learning about something new. I have been studying programming since 2019 where I had the first contact at SENAI Informática. Since then, I have been trying to improve as much as I can my logic, English, programming techniques, Soft Skills and everything else.

I aware about using agile methodologies like SCRUM and KANBAN. They are really helpful to work as team nowadays.

Projects

Supply Delivery - 2021: Sales management system. Still in progress.

Senai Vagas - 2020: Senai student hiring website. Repository
